

EMERGENCY BREATHING SYSTEMS

EBS™

Oil & Gas and Marine

Keep going. Keep safe.

EUREKA

EUREKA EBS™ & SIP

The Eureka EBS™:

Designed to provide lifesaving protection for personell that risk being exposed to asphyxiant, toxic- or explosive gases in case of an emergency situation.

The EBS™ systems can be designed to suit every need, from a very long delivery duration of variable air flow to a large air flow suitable for a large amount of people.

The Eureka EBS™ is a flexible system that can be adopted for installation on fixed and floating offshore installations, drilling rigs & ships, safety standby vessels, supply vessels, in onshore oil & gas facilites and in chemical plants.

In case of gas leaks the flow of fresh air from the Eureka EBS™ can be started both manually and automatically.

A control room equipped with a EBS™ system allows process operators and engineers to stay in the control room to monitor and handle the emergency situation.

The EBS™ system can also be designed to supply air for personal respirators or as a cascade filling system.

The system is designed to meet the demands of DIRECTIVE 94/9/ EC (Exp) ATEX.

Eureka EBS™ delivery options:

- As stand-alone systems.
- As part of a containerized Shelter In Place (SIP).
- The systems can be designed and documented (SAR) to meet SIL3 requirements according to EIC 61508.

EUREKA has currently delivered more than 40 EBS™ systems worldwide.

Breathing Air Compressors

Air Bottles (330 barg)

Pressure Control Panel

RELIABILITY THROUGH EXPERIENCE

Shelter In Place (SIP):

EUREKA AS and long term partner Uniteam AS delivers containerized gas tight shelters complete with a EBS™ system.

No gases can enter the SIP due to internal overpressure in the shelter.

The SIP provides both shelter and a life sustaining air supply to personell until the gas leak has been stopped, or until they can be evacuated to a safe place.

SIP delivery option:

- Can be delivered as a blast resistant design.
